

Report on Bro Golo Visit to Malaysia from 18 to 20 March 2016

Program Theme: "WORLD IN TRANSITION

-The Need for Paradigm Shift

- Awaken to Future of Solar Power and Inner Ecology in addressing climate change and co-creating a new sustainable world"

Bro J Golo Pilz, the solar expert and advisor to BKWSU was on visiting trip to Malaysia and had done great service to inspire and awaken people to the future of solar power and inner ecology in addressing climate change issues and in co-creating a new sustainable world.

Within a short span of three days, Bro Golo did four (4) presentations, 3 interviews, a BK sustenance class and few informal discussions

Wherever he went, his presentations captivated the audience with the truth behind climate change and awaken them to the consequential effect of climate change and the effort that ought to be urgently put in place given the need of the time and the call of Mother Nature

The visit has also sparked off the time and need for Malaysia Asia Retreat Centre (ARC) to further revisit its proposed solar energy system as part of the energy conservation measures. It would also serve to create good institutional identity for ARC and at the same time showcase Brahma Kumaris Worldwide Network continuous environmental friendly policy and initiatives in using renewable energy as alternative sources - with solar energy and the real Supreme Sustainer being the pivotal energy force to be reckoned with in co-creating and restoring the world to its original order, be it at physical and/or metaphysical level.

The awakening and reaching out message

Overall, the programs have created great opportunity

1. In reaching out to serve the Malaysian researchers, scientists, academia, media including businesses and BK practitioners
2. In understanding and awakening people to the call of time, the call of Mother Earth and the call of inner consciousness to do something conscientiously and collectively towards the betterment of mankind and in co-creating a better and more sustainable new living world together

Serving the Academia, Scientists and Researchers – Public Talk in collaboration with University of Malaya (UM)

18 March 2016 Friday morning – 40 took benefit from the public talk jointly organized in conjunction with SENERGY@UM month long campaign on ‘Sustainable Development through Renewable and Green Energy Solutions’. The participants were mainly from academia, scientist, researchers, post graduates and undergraduates and representatives from UMPEDAC and UKM/SERI solar energy research arm including Malay Mail reporter, President of Energy Institute, WWF, environmental activist, Chairman of CETDEM, industrialist as well as UM key representative, Deputy Dean of Frontier Science Research Centre Cluster

The benefit taken

The participants were seen very attentive and fully enjoyed and benefitted much from Bro Golo’s inspirational presentation and ‘4 in 1’ sharing covering the following areas:

1. The understanding and awakening to the greater truth and insight behind climate and ecology changes
2. The works and experiences of Brahma Kumaris in Renewable Energy as a whole
3. The learning, experience and technology used in ‘India- One’ Solar Thermal Power Plant Project which will be a landmark model for the future decentralization of energy in India.
4. The key message on the importance of power of meditation in making a big paradigm shift in ourselves and our role as a CHANGEMAKER in helping to co-create a new world of great order that we envision and where humanity once belonged to

The abundance potential for Solar Energy

In one chart, Bro Golo beautifully summed up a very powerful message about the huge potential of solar energy by comparing the energy resources scenarios in the world as follows:

- The energy needs of the world – as shown in the little box at the bottom right hand corner
- The existing forms of energy resources used such as oil, gas, coal and uranium
- And highlighted the balance being the huge space within that big dimension of the energy block from **solar** that is available in the world

Serving Ministry of Energy, Green Technology, Water (KeTTHa) and related Ministries and agencies

18 March 2016, Friday evening - An excellent dialogue program was held at Ministry of Energy, Green Technology and Water (KeTTHA) and chaired by the Deputy Secretary General of KeTTHA itself - a total of 22 senior personnel participated - representing KeTTHA, Ministry of Natural Resources and Environment, Economic Planning Unit (EPU) under Prime Minister Department, Malaysia Industry – Government Group for Hi-Tech (MIGHT) under Prime Minister’s Office, Suruhanjaya Tenaga (Energy Commission) Putrajaya etc. The audience found the session extremely useful and remarked that *seldom do we have the opportunity to listen to such an advance level of pilot project.*

Is Solar Thermal Power (with energy storage system) Feasible in Malaysia?

To the question of whether solar thermal is feasible in Malaysia given the fact that comparatively Malaysia is more cloudy and does not have the luxury of eight (8) hours direct sunlight as compared to India, Bro Golo opined that Malaysia can consider using flat reflector solar thermal system coupled with PV and other renewable energy such as biomass and biogas.

Interview session with Media – Malay Mail, New Straits Time (NST), Asean Anthrologia Journal based at Asia Europe Institute at University of Malaya (UM) – 18 & 19 March 2016 (Friday & Saturday)

Anthrologia (www.anthrologia.net), represents an online Journal-Chronicle, published monthly through UM and University of South Australia. It publishes multimedia interviews of highly prominent academics in the Social Sciences, Humanities, Cultural Studies, Anthropology, Political Sciences, Architecture, Psychology, The Arts, Linguistics, and so forth, as well as Interdisciplinary work. It also features prominent global strategists and cultural projects.

The publication will offer the contributor significant exposure, academically, and immediate exposure to editors in chief of a range of renowned academic journals.

KEY MESSAGE: World In Transition – Power of Thought & Time through MEDITATION - clean energy from Solar Power and True Sustainer in bringing about the positive change towards a new world order

Bro Golo pointed out that scientific research has concluded that meditation

1. Increases social competence
2. Deepens relaxation and improves health
3. Increases brain cells and activity

So we are in the transition to create and move towards such a world of new order. Henceforth the POWER OF THOUGHT AND TIME THROUGH MEDITATION in connection with the highest and our purest form of Source of Energy would serve the purpose and make the way towards sustaining such a new order in the world to come

20 March 2016, Sunday – World Peace Hour & Talk on ‘WORLD IN TRANSITION: The Truth Behind Climate Change’ in ARC – 50 participated.

Bro Golo concluded his trip with a powerful message and session in ARC taking souls into a beautiful silent reflection journey, demonstrating the effect of thought and time in serving both matter and humanity and in bringing about the critical mass needed in transforming the world into a new sustainable world

'If visionaries of the past created the world we have today, we the visionaries of today can certainly create a more sustainable and beautiful new world order that we envision for the whole humanity' - by Joachim Golo Pilz
